d-night-audio

Introduction

Thank you dear customer for purchasing our **TONEX** package!

This pack contains tone models of a **Brunetti XL R-EVO II** amp as well as a **Mesa Grid Slammer** stomp box for the **IK Multimedia TONEX** eco-system.

You get presets of the amp in different cab/mic configurations with and without stomp in front as well as DI versions to add your own IR or cab.

Furthermore we modeled the stomp itself in different settings to give you even more options.

how to use

You can use our presets with the **IK Amplitube TONEX** eco-system so you can play the models with the **TONEX** stand-alone software, plugin or the **TONEX** Pedal.

For using the stomp models just load another instance of the **TONEX** plugin before your amp model. Unfortunately **TONEX** standalone app and pedal doesn't feature the load of two models simultanously. Therefore we modeled rigs with and without stomp to give you the best variety possible.

To import open the **TONEX** app or plugin and right-klick on a random preset in the preset list. Then klick on "*Import Preset"* and browse to the desired files.

Type "*DNA_BR"* in the search field for all our **Brunetti** presets and "*DNA_GS*" for the **Grid Slammer**.

If you run into trouble send us an E-Mail at **support@d-night-audio.com**

background info

All models were made using the "*Advanced Mode"* of the **TONEX** modeler. We used a **st:rock react:IR** to get the DI signal and a **Palmer DACCAPO** as reamp box.

As preamp we used a **Warm Audio WA73-EQ**.

Settings were made to give you a wide variety in tone from clean to crunch to high gain. If you feel like we missed a certain sound or you have a suggestion, please let us know at
