Introduction

Thank you dear customer for choosing our **TONEX** package!

This pack contains tone models of 6 overdrive stomp pedals for the **IK Multimedia TONEX** eco-system.

The modeled pedals are the ***Maxon OD808, BOSS SD1, Mesa Grid Slammer, Horizon Precision Drive, Earthquaker Devices Plumes*** and ***Peper's Pedals Dirty Tree***.

We focused the models on the individual gain characters of each pedal to give you a broad variety and let you explore the personalities of these units.

how to use

You can use our presets with the **IK Amplitube TONEX** eco-system so you can play the models with the **TONEX** stand-alone software, plugin or the **TONEX** Pedal.

For using the stomp models just load an instance of the **TONEX** plugin before your amp sim or use the **TONEX** pedal in front of an amp. The level/output behavior of the stomp pedals can't really be modeled. We recommend using the output knob on the **TONEX** pedal or the software to set your desired amount of output level.

To import open the **TONEX** app or plugin and click in the upper left corner where you read "*My Preset*". Then click on "*Import Preset*" and browse to the desired files.

You can use the search field to find your pedal. F.e. "*DNA_808*" for the **Maxon**.

If you run into trouble send us an E-Mail at [**support@d-night-audio.com**](mailto:support@d-night-audio.com)

background info

All models were made using the "Advanced Mode" of the **TONEX** modeler. We used a **Palmer DACCAPO** as reamp box and a **Warm Audio WA73-EQ** for preamp.

Settings were made to give you a wide variety in tone from clean to full overdrive. Where it made sense we also included various brightness settings. If you feel like we missed a certain sound or you have a suggestion, please let us know at
